

## AQUAFILL™

### ■ 3-Komponenten-Spachtel

Aquafill wurde speziell zum Auffüllen, Kleben und Reparieren der wasserlöslichen Kernmaterialien Aquacore und Aquapour entwickelt.

Durch das Auftragen von Aquafill erhält der Formkern eine glatte, porzellanartige Oberfläche.

**Aquafill besteht aus drei Komponenten, die einfach zu mischen sind.**

Nachdem der Kern geformt und in einem Konvektionsofen getrocknet wurde kann Aquafill problemlos z.B. mit einem Gummi- oder Kunststoffspachtel aufgebracht werden. Aquafill lässt sich nicht ganz so schnell auswaschen wie Aquacore oder Aquapour - ist jedoch absolut umweltfreundlich und erfordert keine speziellen Entsorgungsverfahren.

## AQUAFILL™

### ■ 3-Component-Filler

*Aquafill has been specially formulated to fill, bond or patch the watersoluble mandrel materials Aquacore and Aquapour. Once applied, Aquafill will give the surface of the mandrel a smooth porcelain-like feel.*

***Aquafill will be delivered in three parts and is easy to mix.***

*Once the mandrel has been formed and dried in a convention oven, Aquafill can be applied easily with a rubber squeegee, such as those used in autobody applications.*

*Aquafill takes slightly longer to washout than Aquacore or Aquapour, but just like the Aquacore and Aquapour it is completely environmentally friendly and requires no special procedures for disposal.*

## Instructions for mixing and using three part Aquafill

**Kit contains three parts: Part A, Part B and Part C**

### To mix

1. Mixing ratio for small quantities: 100 gram = A 40g, B 38g, C 22g
2. Place Part A in mixing bucket
3. Add Part B and slowly mix for 5 minutes
4. Add Part C and mix well until a smooth, even consistency is achieved – approx. 12-15 minutes
5. Shelf life 1 month after mixing

Aquafill™ has been specially formulated to fill or patch the watersoluble mandrel materials Aquacore™ and Aquapour™. Once applied, Aquafill™ will give the surface of the mandrel a smooth porcelain-like feel.

Once the mandrel is dried, there may be small defects on the surface of the mandrel formed by air bubbles in the material. Apply Aquafill™ to the mandrel to patch these defects.

### Tips for applying Aquafill™

- Aquafill™ has been pre-mixed and is ready to use.
- The best method of applying the material is using a rubber squeegee.
- Simply spread Aquafill™ on the mandrel in a very thin coat making sure to fill in all imperfections on the surface.
- If applied too thick, the surface may be bumpy, or it may result in decreased mandrel solubility. Aquafill™ can be sanded to a smooth finish once it has dried.
- Allow at least 30 minutes between coats. Aquafill™ does not need to be dried in an oven, simply allow to air dry.
- The washout time for Aquafill™ is slightly longer than that of Aquacore™, and Aquapour™. The edges of the mandrel may need additional soaking time of about 15 minutes before coming out of the finished part.
- The material can be washed away under a faucet or with a standard low-pressure garden hose. No special procedure is needed the disposal of the product; Aquafill™ is completely environmentally friendly.
